I-15 / Clark Street Interchange Landscape Enhancement Open House

The landscape portion of the I-15 /Clark Street Interchange Enhancement is being funded with enhancement money from the State, and will be maintained by the City of Pocatello.

Myers Anderson Architects has been retained to provide the landscape design for this project. The City of Pocatello and Myers Anderson Architects are interested in your ideas and vision for this location, as well as the other gateways to Pocatello. Our goal is to create a design model that could be implemented at all gateway entrances to Pocatello over time. Our highway interchanges are highly visible, premier locations where we as a community can help to create a unique identity for Pocatello.

Pocatello is known as the “Gate City,” the “Smile Capital,” and the “Volunteer Capitol.” The City sees this enhancement project as an opportunity to establish a common identity for the City of Pocatello. Through landscape design we can express the community vision, while being mindful of the environment, taking advantage of native vegetation and geology, and welcome visitors with pride. Our goal is to create an inspired design, while being sensitive to the maintenance and resource costs for this location.

Please review and answer the attached questionnaire and leave it with us this evening. Thank you for your thoughtful consideration and input.

We would like to thank the City of Pocatello and the Idaho Transportation Department for the unique opportunity to help establish a landscape design model for the gateways to our community, the first being the I – 15/Clark Street Interchange #69.
